

## What's going on out there?

The Internet is today's Wild West. It's a highly complex environment that's rife with opportunities for less-than-ethical individuals and entities ready to take advantage of innocent explorers. Every new web-based technology that appears will be followed almost immediately by bad guys who've figured out how to exploit that technology to their own ends.

These threats can be broken out into four distinct categories:

- **Smart and subtle criminals**
- **Exploitative technology developers**
- **Kids and other gamers**
- **Slimy and unsubtle marketers who acquire threats from all three groups**

## Why you need a new layer of protection

These threat vectors operate in a completely different way than traditional anti-malware vectors; websites delivering malicious software are typically transient, being active for just a few hours before being replaced by a different site, or infections may be delivered through temporary "poisoning" of legitimate websites.

Fear not. AVG Internet Security will protect you against any kind of threat these cybercriminals can throw at you. AVG Internet Security gives you powerful, easy-to-use protection that works efficiently and unobtrusively in the background, letting you focus on using your computer, not worrying about security.

## AVG Internet Security gives you complete, real-time protection against the latest web-borne threats:

- Comprehensive protection for today's threat landscape:
  - Real-time safe searching and surfing for a trouble-free online experience
  - Anti-phishing to protect against identity theft
  - Download files from the web and exchange files via instant messaging without the risk of malware infection
  - Unified anti-malware engine quickly and efficiently keeps spyware, viruses and worms out
  - Self-learning, personalized anti-spam keeps inboxes free of junk
  - Intelligent firewall quietly and efficiently keeps hackers at bay
  - Advanced anti-rootkit technology defuses even the most complex techno smart bombs
  - Emergency protection service whenever a new threat appears
- Automatic update service for continuous protection
- Fast, effective performance without slowing systems down
- All-in-one, easy to use protection – install and forget
- Works in the background – doesn't get in the way
- Emergency protection service delivers protection against the latest threats right away
- Fast-response customer support and service around the world and around the clock
- Certified by all major third-party security labs (VB100%, ICISA, West Coast Labs Checkmark)

## Tough on threats. Easy on you.

AVG's new, user-friendly graphical interface ensures that you can protect yourself, your family, and your business without disruption or system slowdown.

Features	AVG Internet Security
Real-time protection from poisoned web pages	✓
Safely click search results	✓
Detects and removes viruses, worms and spyware	✓
Stops junk email and spam-based identity theft attacks	✓
Blocks hackers and cyber criminals	✓
Advanced system performance tuning	✓
Screens downloads for malicious content	✓
Detects and removes hidden malicious code	✓
Protects from infected files while using Instant Messaging	✓
Always up-to date protection	✓
Free online support around the clock	✓

## AVG protects you from:

- Viruses that can infect your PC and destroy your data
- Spyware that can follow you around the web and steal your personal information
- Rootkits that can hide malware on your system
- Hackers who can tunnel into your system and take whatever they want
- Spam that can clog your inbox and slow down your mail system
- Identity theft that can happen if phishing and other attempts to steal personally identifiable data succeed in convincing you they're real.

## New Safe Surf and Search

AVG's unique Active Surf-Shield and Search-Shield protect you in real time against malicious web pages, zero day exploits and drive-by downloads. Other programs rely on static databases and cannot protect you at the only time that matters – the time you click on a link. When you search using Google, Yahoo, or MSN, if the results include websites that contains malicious code, AVG simply blocks the page so you can't accidentally infect your system. Other questionable or suspicious sites are flagged with an alert to show you the degree of risk of the page.

## Technical support

Our online virus encyclopedia and comprehensive FAQs will answer most of your questions, but if you need more support, or if you have a security emergency, our technical support team is on hand to help 24 hours a day, 365 days a year.

## Supported platforms

Windows 2000/XP(32/64 bit)/  
Vista(32/64 bit)

## Supported languages

English, Brazilian Portuguese, Czech, Danish, Dutch, French, German, Hungarian, Italian, Japanese, Polish, Portuguese, Serbian, Slovakian, Spanish
